1. Pick up Pointing to the current location, even if we select somewhere else as the pickup location.
STR : Request a trip with the pick-up location as smartcity >> Check the confirm page pickup pointer showing.

2. The rider app screen showing the retry page even the driver accept the trip (Round trip).
3. The wait notification is not showing in the rider app.

1. Pick up Pointing to the current location, even if we select somewhere else as the pickup location.
STR : Request a trip with the pick-up location as smartcity : Check the confirm page pickup pointer showing.

Selecting a location via search works fine.

Selecting from recent locations causes the issue.

Moving the map marker to choose the location also triggers the issue.

2. The rider app screen showing the retry page even the driver accept the trip (Round trip).

This may be due to a delay in receiving the push notification.

There is no issue observed on the front end.

3. The wait notification is not showing in the rider app.

There seems to be an issue with receiving the notification from the backend when the "Wait/Stop" button is pressed.
