Description

According to the functional requirements, the fare breakdown must be organized by their respective categories (e.g., base fare, taxes, surcharges, discounts, etc.). Each category should be displayed within a collapsible view to allow users to expand or collapse the details as needed. This will help improve the readability and user experience by minimizing information overload, especially when the fare structure includes multiple components. The collapsible sections should be clearly labeled with the category name, and the expanded view should display all relevant fare components under that category.

Trip collect payment screen changes in Rider Failed

When a rider requests a trip, the rider's screen displays the home screen once the trip request is accepted by the driver. However, when the driver tries to start the trip, they are unable to enter the pin since the rider app does not display the pin, which acts as a barrier to testing this bug.
